CC       ABSORBS MAXIMALLY IN THE FAR RED REGION. FR IS CONVERTED TO PFR IN
CC       PFR INDUCES AN ARRAY OF MORPHOGENIC RESPONSES, WHEREAS
CC       RECONVERSION OF PFR TO PR CANCELS THE INDUCTION OF THOSE
CC       RESPONSES. PFR CONTROLS THE EXPRESSION OF A NUMBER OF NUCLEAR
CC       GENES INCLUDING THOSE ENCODING THE SMALL SUBUNIT OF RIBULOSE-
CC       BISPHOSPHATE CARBOXYLASE, THE CHLOROPHYLL A/B BINDING PROTEIN,
CC       LHCP APOPROTEINS, PSBS, PSAD, PSAE, ET AL. IT ALSO CONTROLS
CC       THE EXPRESSION OF A GAMMA-GLUTAMYL TRANSPEPTIDASE.
CC   -!- SUBUNIT: HOMODIMER (BY SIMILARITY).
CC   -!- PTM: CONTAINS ONE COVALENTLY LINKED TETRAPYRROLE CHROMOPHORE.
CC   -!- SIMILARITY: BELONGS TO THE PHYTOCHROME FAMILY.
CC   -!- SIMILARITY: CONTAINS 2 PAS (PER ARNT SIM) DOMAINS.
CC   -!- SIMILARITY: CONTAINS 1 PAS ASSOCIATED C-TERMINAL (PAC) DOMAIN.
CC   -!- SIMILARITY: CONTAINS 1 HISTIDINE KINASE DOMAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Use of blocking monoclonal antibody capable of binding to an epitope of

PT VLA-1 for treating inflammatory disorders, in particular arthritis
XX
PS Claim 1; Fig 15; 60pp; English.
XX
CC The present invention relates to the use of an alpha1-I domain
CC blocking antibody capable of binding the ligand binding domain of human alpha1
CC integrin domain (VLA-1). The antibody of the present invention is
CC useful for treating an inflammatory disorder e.g. rheumatoid arthritis,
CC skin related conditions such as psoriasis, eczema, burns and dermatitis,
CC asthma, bronchitis, menstrual cramps, tendinitis, bursitis, and the
CC treatment of pain and headaches, or as an antipyretic, for the treatment
CC of fever, gastrointestinal conditions such as inflammatory bowel
CC diseases, Crohn's disease, gastritis and vascular diseases, migraine
CC headaches, periarteritis nodosa, thyroiditis, aplastic anaemia, Hodgkin's
CC disease, rheumatic fever, type I diabetes, myasthenia gravis, multiple
CC sclerosis, sarcoidosis, nephrotic syndrome, myocardial ischaemia,
CC allergic rhinitis, respiratory distress syndrome, cerebral ischaemia
CC syndrome and atherosclerosis.

XX
PT Nucleic acid molecules encoding human secreted extracellular matrix
PT proteins, used in preventing, treating or ameliorating a disorder, e.g.
PT Alzheimer's and Parkinson's diseases and cancers
XX
PS Claim 11; SEQ ID No 284; 577pp; English.
XX
CC The invention relates to isolated nucleic acid molecules encoding
CC novel human secreted extracellular matrix proteins (SPs). The
CC polynucleotides and proteins are used to prevent, treat a medical
CC condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
CC chickens or sheep. For example, disorders associated with decreased
CC expression of SPs. The SP polynucleotide or a vector expressing them may
CC be administered to treat diseases by gene therapy. Antisense molecules
CC may be administered to down regulate expression of SPs by binding with
CC the cells own genes and preventing their expression. The polynucleotides
CC may also be used as DNA probes in diagnostic assays. The SPs may also be
CC used as antigens to produce antibodies and to identify modulators
CC (agonists and antagonists) of the SPs. The anti-(SP) antibodies and
CC antigens, which may be used to down regulate expression and activity of
CC SP and as diagnostic agents for detecting the presence of SPs in samples.
CC The invention relates to examples of immune/autoimmune diseases (e.g. HIV
CC (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis
CC and multiple sclerosis), cancers and hyperproliferative disorders (e.g.
CC melanomas, neoplasms of the breast or liver, Sezary syndrome and
CC Gaucher's disease), neurological diseases (e.g. Alzheimer's disease,
CC Parkinson's disease), cardiovascular disorders (e.g. cardiac
CC arrest, tachycardia and angina), infections caused by bacteria, viruses
CC and fungi and ocular disorders (e.g. corneal infections). Other uses
CC include wound healing, maintenance of organs before transplantation.

PT Novel human secreted extracellular matrix proteins (SPs) -
PT protein, used in preventing, treating or ameliorating a disorder, e.g.
PT Alzheimer's and Parkinson's diseases and cancers -
XX
PS Claim 11; SEQ ID NO 111; 577pp; English.
XX
CC The invention relates to isolated nucleic acid molecules encoding
CC novel human secreted extracellular matrix proteins (SPs). The
CC polynucleotides and proteins are used to prevent, treat a medical
CC condition in mammals, humans, mice, rabbits, goats, horses, cats, dogs,
CC [illegible] sheep. For example, diseases associated with decreased
CC expression of the SP polynucleotide or protein expression may
CC be administered to treat diseases by gene therapy. Antisense molecules
CC may be administered to down regulate expression of SPs by binding with
CC the cellular messenger and preventing their expression. The polynucleotides
CC may also be used as DNA probes in diagnostic assays. The SPs may also be
CC used as antigens to produce antibodies and to identify modulators
CC (agonists and antagonists) of the SPs. The anti-(SP) antibodies and
CC antagonists may also be used to down regulate expression and activity of
CC SP and as diagnostic agents for detecting the presence of SPs in samples.
CC The disorders include, for example, infectious diseases (e.g. HIV
CC (human immunodeficiency virus) infection, anaemia, rheumatoid arthritis
CC and multiple sclerosis), cancers and hyperproliferative disorders (e.g.

CC melanomas, neoplasms of the breast or liver, Sezary syndrome and
CC Gaucher's disease), neurological diseases (e.g. Alzheimer's disease,
CC Parkinson's disease), cardiovascular disorders (e.g. cardiac
CC arrest, tachycardia and angina), infections caused by bacteria, viruses
CC and fungi and ocular disorders (e.g. corneal infections). Other uses
CC include wound healing, maintenance of organs before transplantation,

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity
XX
PS Claim 20; SEQ ID NO 59594; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat pathologies involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression. Biological activity
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30477 represent novel human
CC diagnostic amino acid sequences of the invention.

PT Inhibition of tumor angiogenesis through interaction of vascular
PT endothelial growth factor and integrin cell surface receptors
XX
PS Disclosure; Fig 2A-C; 64pp; English.
XX
CC This invention describes a novel method for the inhibition of tumour
CC angiogenesis mediated by vascular endothelial growth factor (VEGF) and
CC integrin cell surface receptors expressed in vasculature of living
CC subjects. The method inhibits new capillary and new blood vessel
CC formation both within a tumour mass itself as well as in the immediately
CC adjacent blood vasculature surrounding the perimeter of the tumour mass
CC Interaction and dependence upon VEGF to induce specific integrin
CC heterodimers in tumour angiogenesis provides a novel method for
CC inhibiting tumour angiogenesis, and unlike prior art relies on the
CC specific inter relationship of VEGF and integrins, rather than
CC concentrating solely on one specific class of protein.

CC AAR87639-R87640 and AAR88415-R88418 represent synthetic peptides used as
CC antigens in an immunogenic composition of the invention. The
CC immunogenic composition also contains a novel adjuvant. This adjuvant
CC comprises a mineral salt adjuvant (MSA), and at least one other adjuvant.
CC Another immunogenic composition covered within the scope of the
CC invention comprises an antigen covalently linked to a glycolipid
CC [illegible] MSA. The [illegible] having a
CC reactive functional group, such as maleimidyl, succinimidyl or
CC 2-pyridyldithio. The MSA is preferably aluminium hydroxide, aluminium
CC phosphate, calcium phosphate, zinc hydroxide or calcium hydroxide. The
CC other adjuvant may be a glycolipid analogue, an octadecyl ester of an
CC amino acid or a lipoprotein. The glycolipid analogue is preferably the
CC glycosylamide
CC N-(2-deoxy-2-L-leucylamino-beta-D-glucopyranosyl)-N-octadecyldodecanamide
CC acetate. The immunogenic compositions can be used to induce an immune
CC response to antigens such as antigenic determinants of HIV (such as this
CC sequence), rubella virus, respiratory syncytial virus, Bordetella
CC pertussis, Haemophilus influenzae or Streptococcus pneumoniae. The use
CC of two different adjuvants can provide an enhanced immune response where
CC their effect can be additive or synergistic

PT   New nucleic acids and proteins isolated from the non thermophilic
PT   crenarchaeote Cenarchaeum symbiosum, useful in characterizing the
PT   physiology of these archae and in therapeutic, industrial or laboratory
PT   techniques
XX
PS   Claim 26; Page 171; 210pp; English.
XX
CC   AAA55186 to AAA55226 and AAY90914 to AAY90951 represent nucleic acids
CC   and proteins isolated from the non-thermophilic crenarchaeote
CC   Cenarchaeum symbiosum. The nucleic acids and proteins identified in
CC   the present invention are useful in characterising the physiology of
CC   these archae and can be used in therapeutic, industrial or laboratory
CC   techniques. AAA55227 to AAA55260 represent promoter sequences from
CC   Cenarchaeum symbiosum. AAA55261 to AAA55263 represent PCR primers and
CC   probes used in examples from the present invention.

PT Nucleic acid encoding 7224 human nervous system antigen polypeptides,
PT useful for prevention, treatment and/or diagnosis of cancer
PT cancers and metastases
XX
PS Claim 11; SEQ ID NO 4887; 170pp; English.
XX
CC The invention relates to novel genes (ABA11084 ABA21544) and proteins
CC (ABB14678 ABB03001) useful for prevention, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (anti)agonists are useful
CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital
CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC colitis; (c) cardiovascular disorders such as myocardial infarction

```
CC   (d) wound healing, (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   New peptide(s) with immunological properties of HIV-2 envelope protein -
PT   having the structure of simian immune deficiency virus proteins,
PT   useful in diagnosis and of vaccine components
XX
PS   Disclosure; Fig 1B; 86pp; French.
XX
CC   New peptides which have immunological properties in common with those of
CC   the peptide skeleton of the envelope protein of HIV 2 and also have a
CC   peptide structure in common with that of SIV-1 glycoprotein are claimed.
CC   Antigenic and immunogenic conjugates contg. the peptides and a kit to
CC   detect HIV-2 in biological fluids are new. The peptides are useful for in
CC   vitro diagnosis of HIV-2 infection and some of them can be used as
CC   components of immunogens and vaccines against HIV. Antibodies raised
CC   against them can be used for treatment of AIDS.

XX
PS   Disclosure; Page 27; 179pp; English.
XX
CC   The invention relates to nucleic acid sequences (AAX22111 to AAX22134)
CC   encoding human secreted proteins (AAY01135 to AAY01158). The secreted
CC   protein gene sequences are deposited with the ATCC under deposit number
CC   ATCC 209118. Host cells comprising recombinant vectors containing the
CC   nucleic acid sequences are used for the recombinant production of the
CC   secreted proteins. The polynucleotide and amino acid sequences are useful
CC   for are useful for preventing, treating or ameliorating medical
CC   conditions e.g. by protein or gene therapy. Pathological conditions can
CC   be also diagnosed by determining the amount of the new polypeptides in a
CC   sample or by determining the presence of mutations in the new
CC   polynucleotides. Specific uses are described for each of the
CC   polypeptides, based on which tissues they are most highly expressed
CC   in, and include developing products for the diagnosis or treatment of
CC   cancer, tumours, developmental abnormalities and foetal deficiencies,
CC   autoimmune diseases, lymphomas, Alzheimer's and cognitive disorders,
CC   schizophrenia, immunological disorders, immune deficiency diseases
CC   (AIDS), mood disorders, respiratory disorders, arthritis, asthma,
CC   haematopoietic disorders, neural disorders, skeletal disorders,
CC   osteoporosis, metabolic disorders, cardiovascular disorders, endocrine
CC   disorders or gastrointestinal disorders. The polypeptides are also useful
CC   for identifying their binding partners. The present sequence represents a
CC   polypeptide fragment encoded by a gene of the invention (see description
CC   line for gene number).

PT   New soluble single chain T-cell receptors - useful in suppressing
PT   and diagnosing auto-immune disease by binding specific
PT   antigen-MHC complex and treating infectious diseases
XX
PS   Example 2; Page 42; 64pp; English.
XX
CC   To increase the solubility of the soluble, anti-fluorescein scTCR
CC   as in AAQ15129 and AAQ15507, a number of hydrophobic variable region
CC   framework amino acid residues predicted to be surface exposed were
CC   replaced with more hydrophilic amino acid residues, as indicated in
CC   the features.  The sequence (AAQ15508) encoding this protein was
CC   subcloned into the pSS1 secretion vector, which has the polylinker
CC   replaced with the pectate lyase B (pelB) leader sequence of Erwinia
CC   carotovora (with its RBS) and a new polylinker.
CC   The gene product is useful in a compsn. for suppressing autoimmune
CC   disease when administered to a mammal in a therapeutically effective
CC   amt.  Doses are 0.01-1.0 mg/kg/day, pref. ...
